GLOBAL AIDS UPDATE 2018

Slow global progress

Number of AIDS-related deaths, number of new HIV infections and incidence:prevalence ratio, global, 2000–2017 and 2020 targets

Source: UNAIDS 2018 estimates.

Aiming for the 2020 treatment target

Number of people living with HIV accessing antiretroviral therapy, global, 2000–2017 and 2020 target

Source: UNAIDS 2018 estimates. Global AIDS Monitoring, 2018.

Global 90-90-90 Gaps, 2017

HIV testing and treatment cascade, global, 2017

Source: UNAIDS special analysis, 2018; see annex on methods for more details

160 000 people diagnosed with HIV in Europe in 2016 – highest number ever

West

26 602

6.2 per 100 000

Centre

5 772

2.9 per 100 000

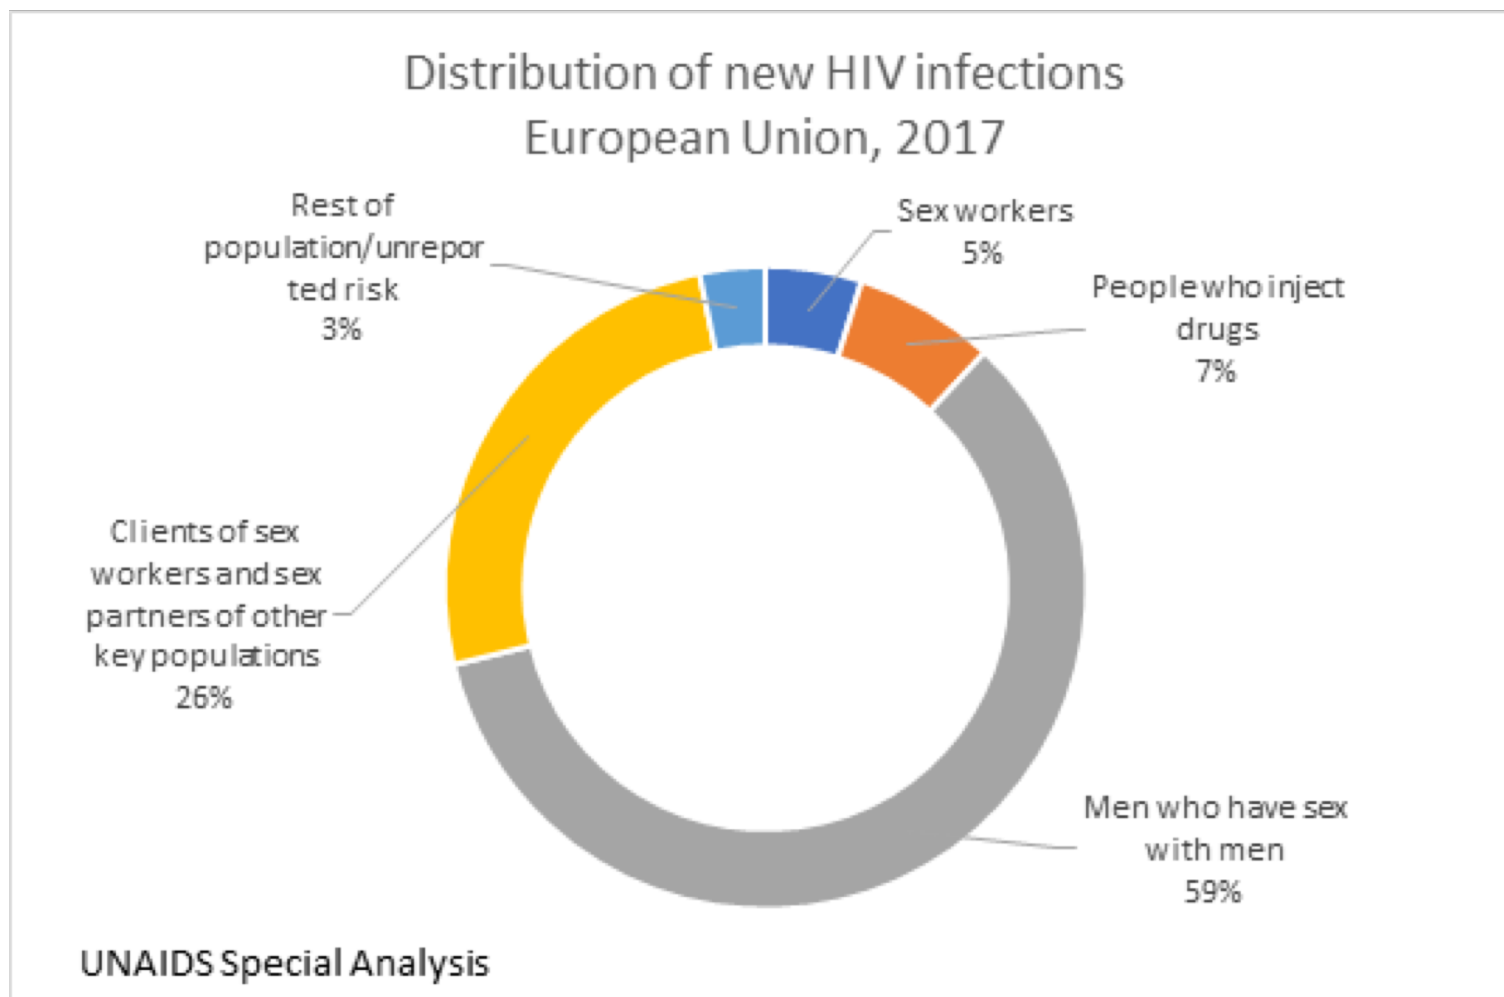

East

128 079

50.2 per 100 000

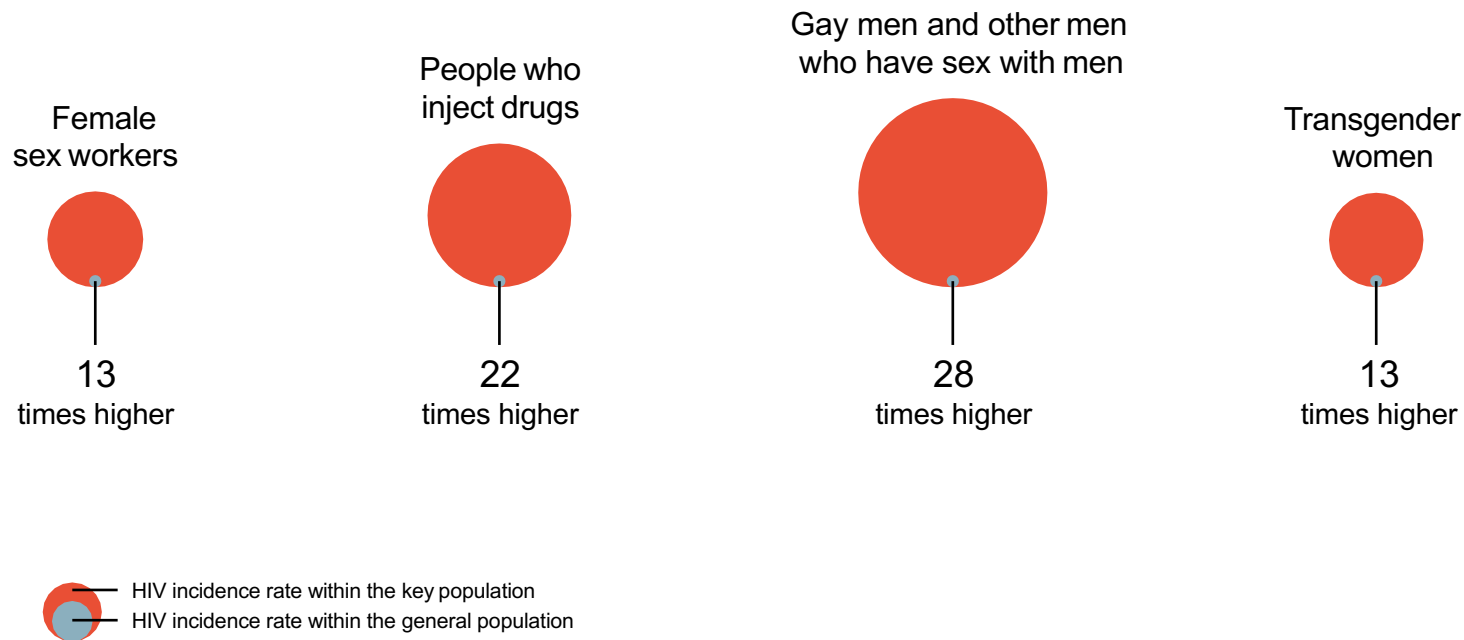

New HIV Infections Still Affecting Key Populations

Key populations at higher risk of infection

Relative risk of HIV acquisition, by population group compared to the general population, global, 2017

Source: UNAIDS special analysis, 2018.

Tuberculosis treatment for people living with HIV still low

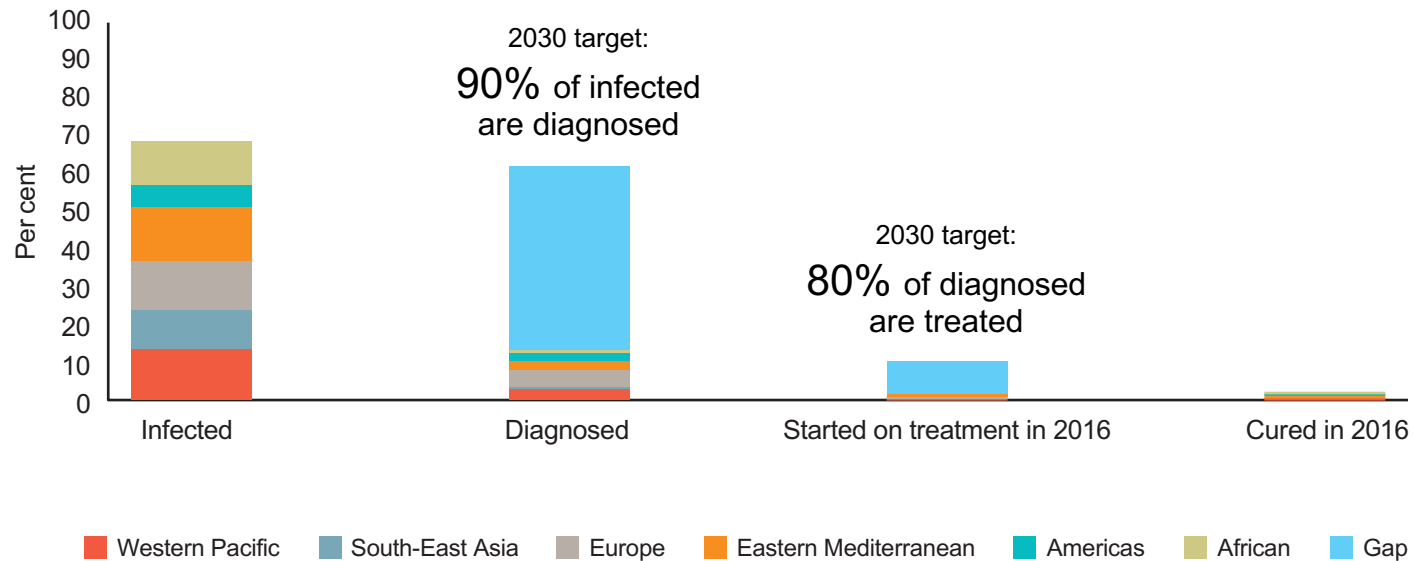

Percentage of people living with HIV with incident tuberculosis who received treatment for both tuberculosis and HIV, global, 2000–2016

Source: 2017 Global AIDS Monitoring; Global tuberculosis report, 2017. Geneva: World Health Organization; 2017.

Global treatment gap for hepatitis C

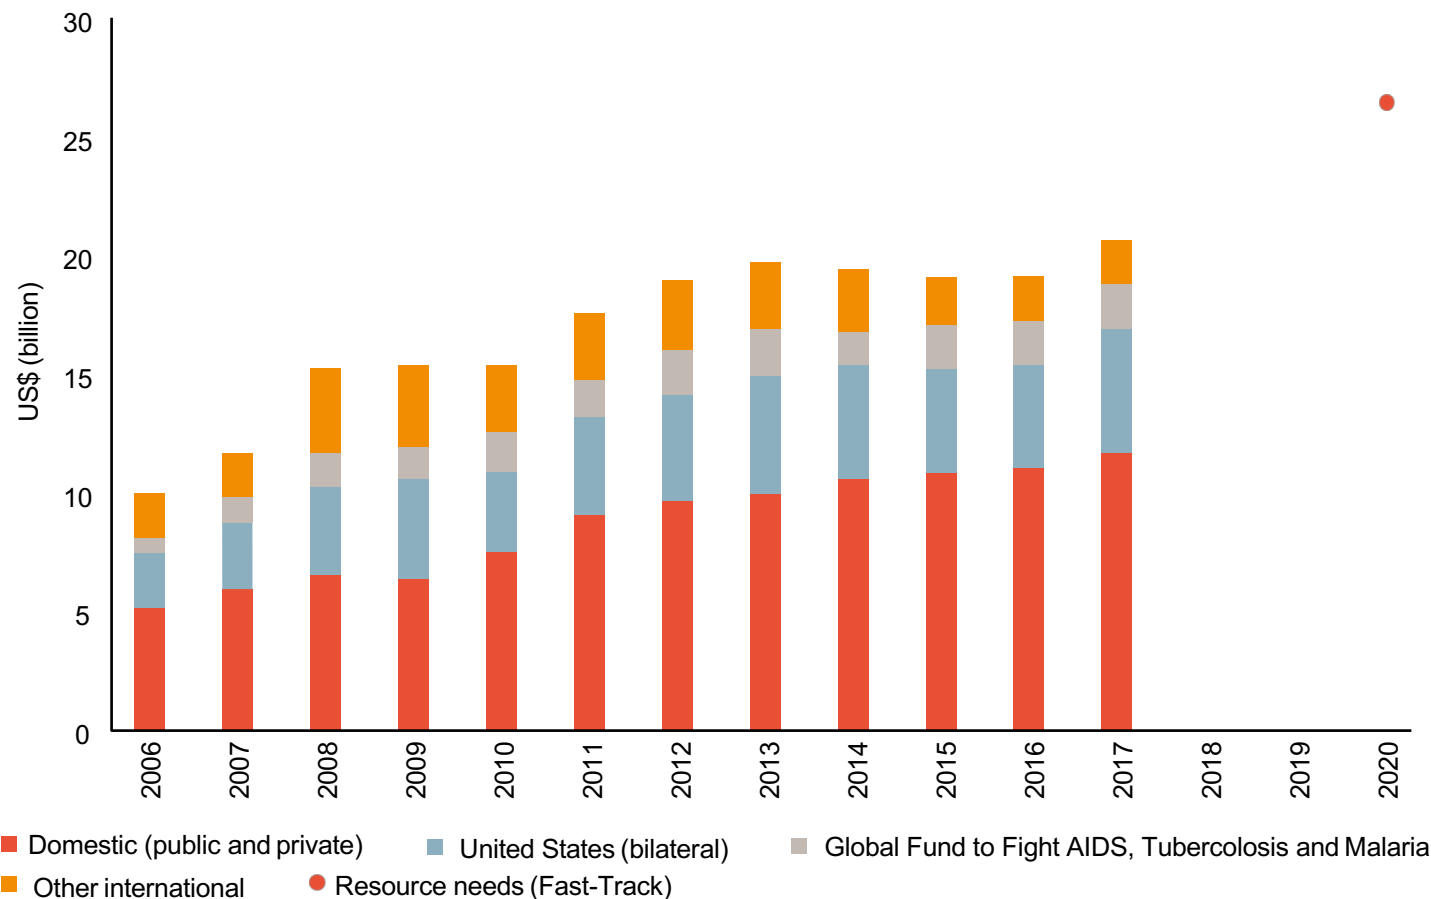

Cascade of care for people living with hepatitis C virus infection, by WHO region, 2016

Source: Progress report on access to hepatitis C treatment: focus on overcoming barriers in low- and middle-income countries. Geneva: World Health Organization; March 2018.

Financial resources not adequate to close the gaps

HIV resource availability in low- and middle-income countries (in constant 2016 US dollars), by source of funding, 2000–2017 and 2020 target

* Estimates for low- and middle-income countries per 2015 World Bank income level classification. All figures are expressed in constant 2016 US dollars.
